

Christiaan

Quantum Engineer

Hi! I'm Christiaan and I design different coloured crystals, understanding how the colour is created at a miniscule level. By understanding how the crystal colour works I can come up with **creative** ways to apply this in future technologies, like quantum computers which will allow faster ways to solve really tricky problems. I love how there is always something new to discover, and improve, within engineering. My ideas often fail several times but being **persistent** and **learning from mistakes** is a great way to progress.

I design different coloured crystals
