

Moh

Civil Engineer

Hi! I'm Moh and I test soil so people know how to build on top of it. I'm **passionate** about amazing buildings and my job is all about checking different types of soil and rocks to make sure when we build on them the buildings don't fall down. I take the **lead** on my work but it is also important to **listen** to, and learn from, others. There are so many different types of soil, rocks and buildings and I love the variety in engineering.

I test soil so people know how to build on top of it.
